Igor Markin

Senior Full-Stack Engineer · Python, TypeScript, Node.js · LLM-powered products and AI agents

Northern Israel (hybrid around Haifa) or remote · +972-53-354-8676 · 9588604@gmail.com · igor-markin.github.io · linkedin.com/in/markin-pro · github.com/igor-markin

Summary

Senior full-stack engineer with 11 years in web development: 5 years as a freelancer and 6 years in product teams, including a team lead role. I work mostly on the backend with Python, Node.js, TypeScript and PostgreSQL, and I build LLM features that work reliably in production. I use AI coding agents every day, but I own the design, review every change and test the result myself.

Open to Senior Full-Stack or Backend roles. Employee or contractor through my Israeli business. English and Russian; basic Hebrew.

Experience

Defacta · Lead Engineer (Contract)

Mar 2026 – Present · Israel, remote

Early-stage startup that helps people check claims and sources in texts with LLMs. Lead engineer in a team of six.

- Took the product from a backend pipeline to a web app and a Chrome extension in production
- Owned architecture, releases and production support
- Compared models for the extension by quality, speed and cost, and chose the production setup
- Built user accounts, credits and payments, report sharing and export
- Set up error tracking, monitoring and separate production and development environments

Stack: Python, FastAPI, React, TypeScript, PostgreSQL, Redis, Celery, Docker

Adzz · Team Lead

Aug 2023 – Apr 2026 · Israel, on-site · Senior Software Engineer, Mar 2023 – Aug 2023

Online marketing company. I owned the internal platform behind its operations and content production, and later led the development team.

- Designed an LLM content pipeline from scratch: the cost of one article went from $40 to $0.50 (about 98% less) across 58 projects. Business-critical rules stayed in code, not in prompts
- Built the internal platform: CRM, marketplace and QA bots
- Built Playwright automation that works with thousands of external sites every day, including sites without APIs
- As team lead, introduced code review and CI/CD and mentored four engineers while staying hands-on

Stack: Node.js, TypeScript, React, Playwright, PostgreSQL, LLM APIs

Claustrophobia · Backend Developer (Python, Django)

2021 – 2023 · Moscow, Russia

Network of escape rooms. Django backend and internal admin tools.

- Cut load time of key admin pages from about two minutes to under two seconds with SQL optimization and caching
- Restored a broken Django migration history so the team could deploy safely again

Stack: Python, Django, PostgreSQL, Docker

Legsy · Python Developer

2020 – 2021 · Moscow, Russia

- Built a fintech MVP for retail investors with several brokerage API integrations and real-time stock alerts

Freelance Web Developer

2015 – 2020

- 70+ websites for small businesses, mostly on WordPress; full cycle directly with business owners

Own products

- **Torhair** (torhair.co.il) — booking system in production for an independent hairstylist in Israel: online booking, mobile admin, reminders, double-booking protection, verified backups. TypeScript, React Router, Node.js, SQLite, Docker
- **Hebrew Live** (GitHub) — open-source Mac app for live Hebrew transcription and translation with local models on Apple Silicon. Python, MLX, TypeScript, React, Electron
- **Live Markdown Preview** (live demo) — local-first Markdown editor, featured on Product Hunt. TypeScript, Preact, Vite, IndexedDB, Cloudflare Workers

Skills

- **Backend:** Python, FastAPI, Django, Node.js, PostgreSQL, Redis, Celery, REST APIs
- **Frontend:** TypeScript, React, Preact, Vite, Electron
- **AI:** LLM APIs, AI agents, model evaluation, local models on MLX
- **Quality and delivery:** Docker, Playwright, Vitest, CI/CD, monitoring

Education

- **Yandex Practicum** — Backend Python Developer, 2020 – 2021
- **Moscow State Forest University** — Applied Mathematics and Computer Science coursework (degree not completed), 2007 – 2009
